

Introduction to Power Apps Model-driven and Canvas Apps

Kelsey Bloomquist & James Bamford

June 16, 2020

Meet the team

Kelsey Bloomquist
Product Solution Architect

James Bamford
Product Solution Architect

Series Expectations

Goal

Learn to build business solutions fast, at any technical skill level, by harnessing the power of connected data and using the capabilities provided by Dynamics 365 + the Power Platform

Audience

The citizen developer
The professional developer
And everyone in between!

Today's Agenda

June 16, 2020

Introduction to Application Development

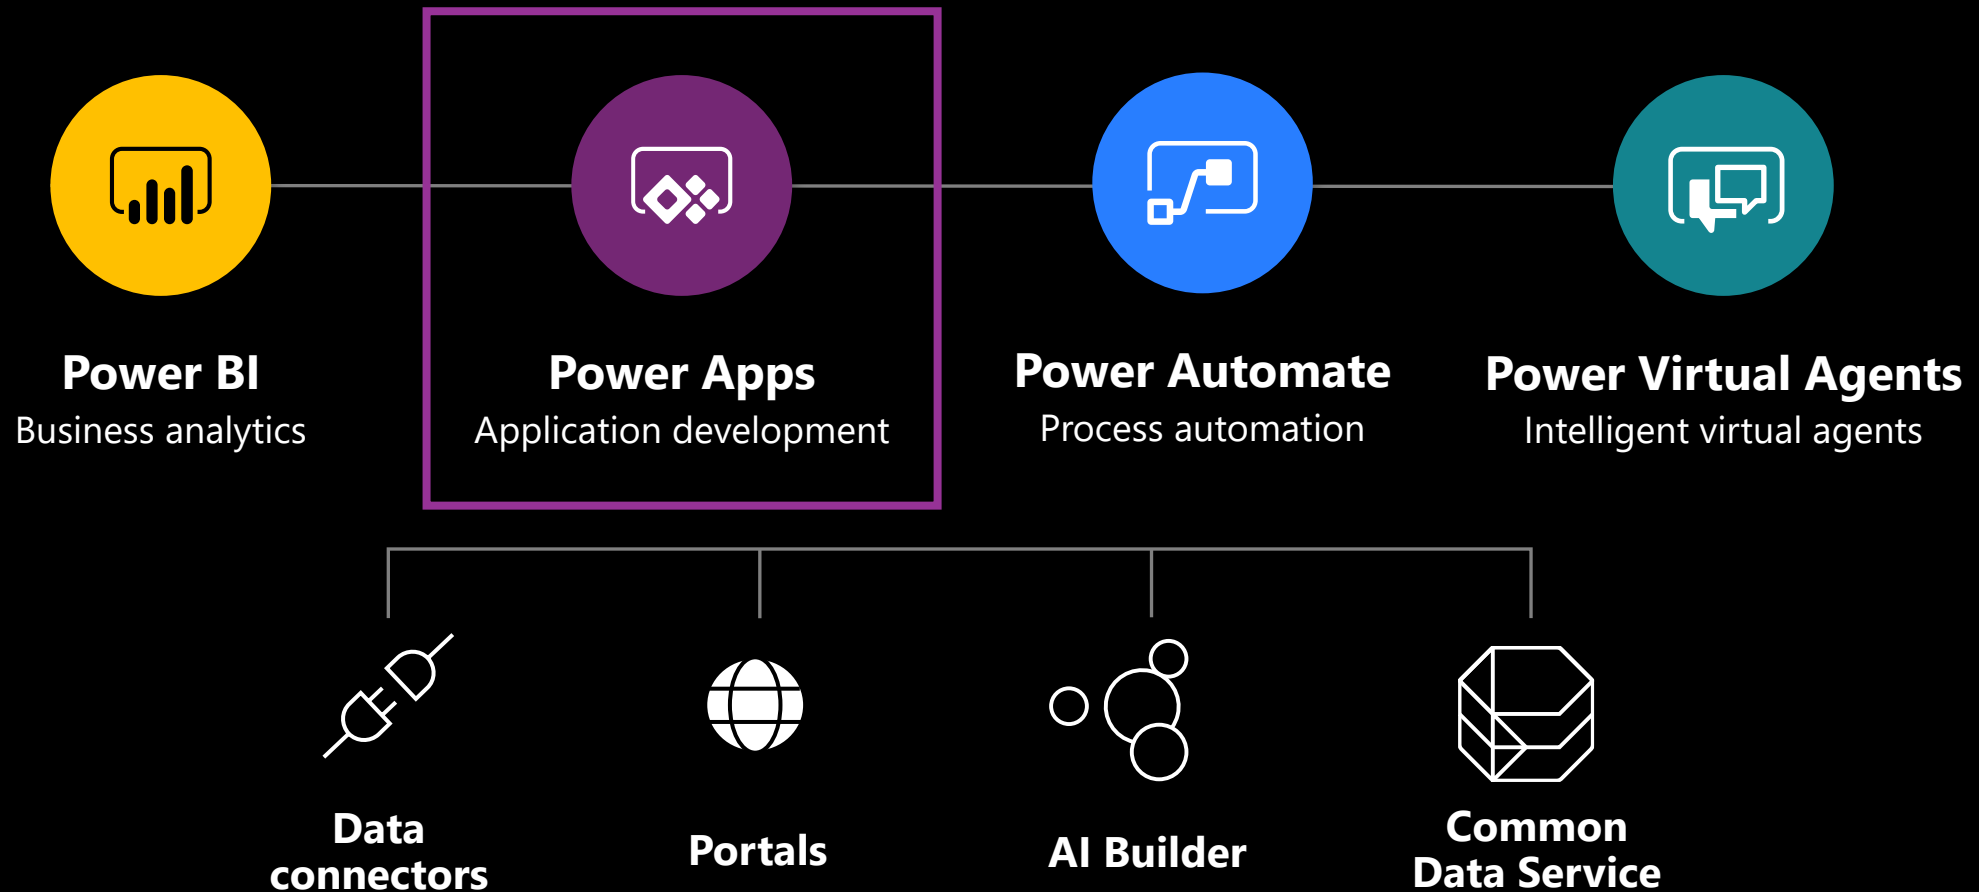

- Overview of Power Apps
 - Model-driven apps
 - Canvas apps
- Building a Canvas app
 - Review Lamna Patient Tracker App
 - Set up proper app navigation
 - Create pop up notification
- Embedding Controls with Power Apps Component Framework

Microsoft Power Platform

One low-code platform that spans Office 365, Dynamics 365, and standalone applications

Analyze. Act. Automate. Assist.

Power Apps Mission:

Empower every developer to do more

Citizen Developers

IT Developers

Pro Developers

Power Apps

A low-code approach to building apps

Easily build apps with a full featured low-code / no-code platform

Connect to all your data with 325+ pre-built connectors and custom connectors

Enrich and extend your data with the Common Data Service, AI Builder, and Portals

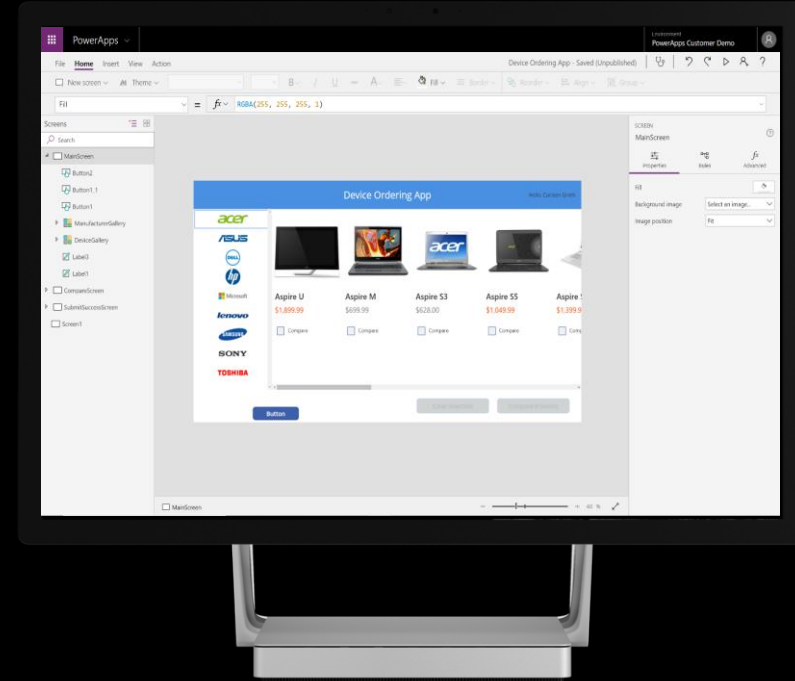

Office 365, Azure, Dynamics 365, Power BI, Power Automate, Power Virtual Agent Integration

Strong Enterprise governance & security

Pro-dev extensibility enable "no limits" development

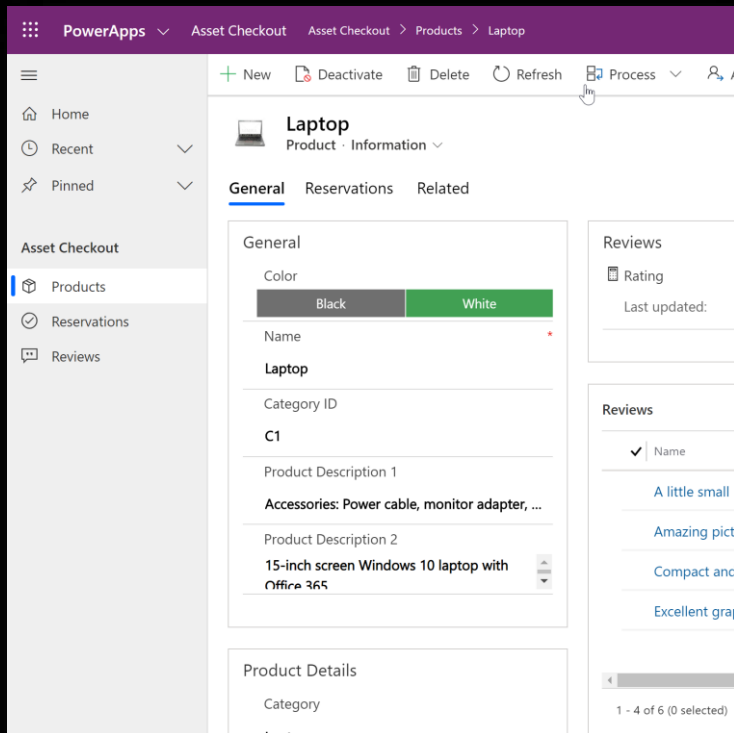

Enterprise-grade

Cloud and on-premises connectivity

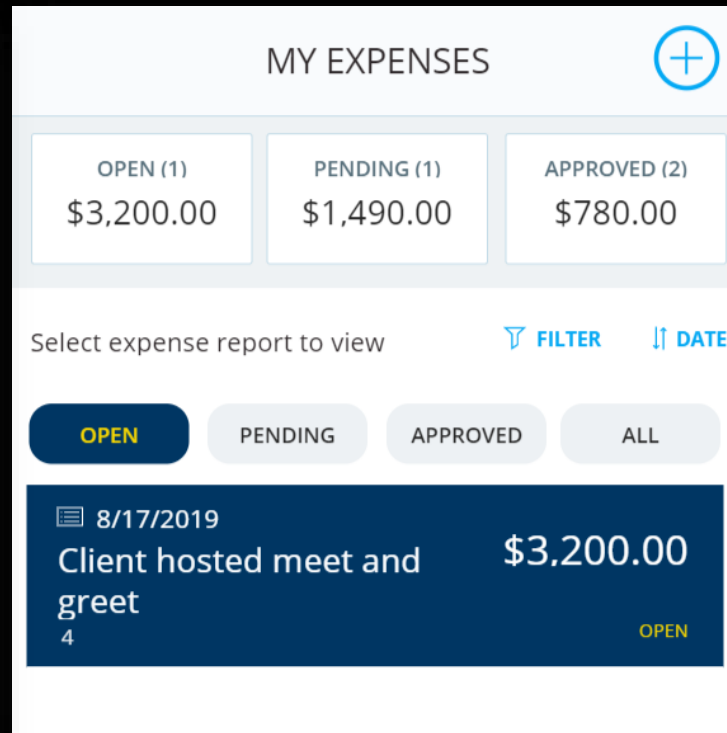

Pro-developer extensibility

Power Apps

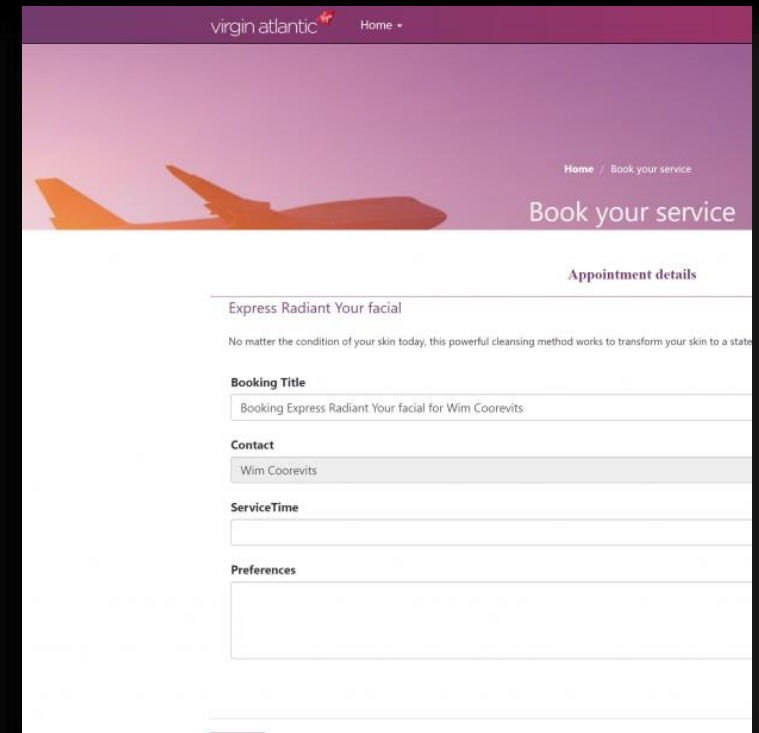

App Types

Model-driven Apps

Canvas Apps

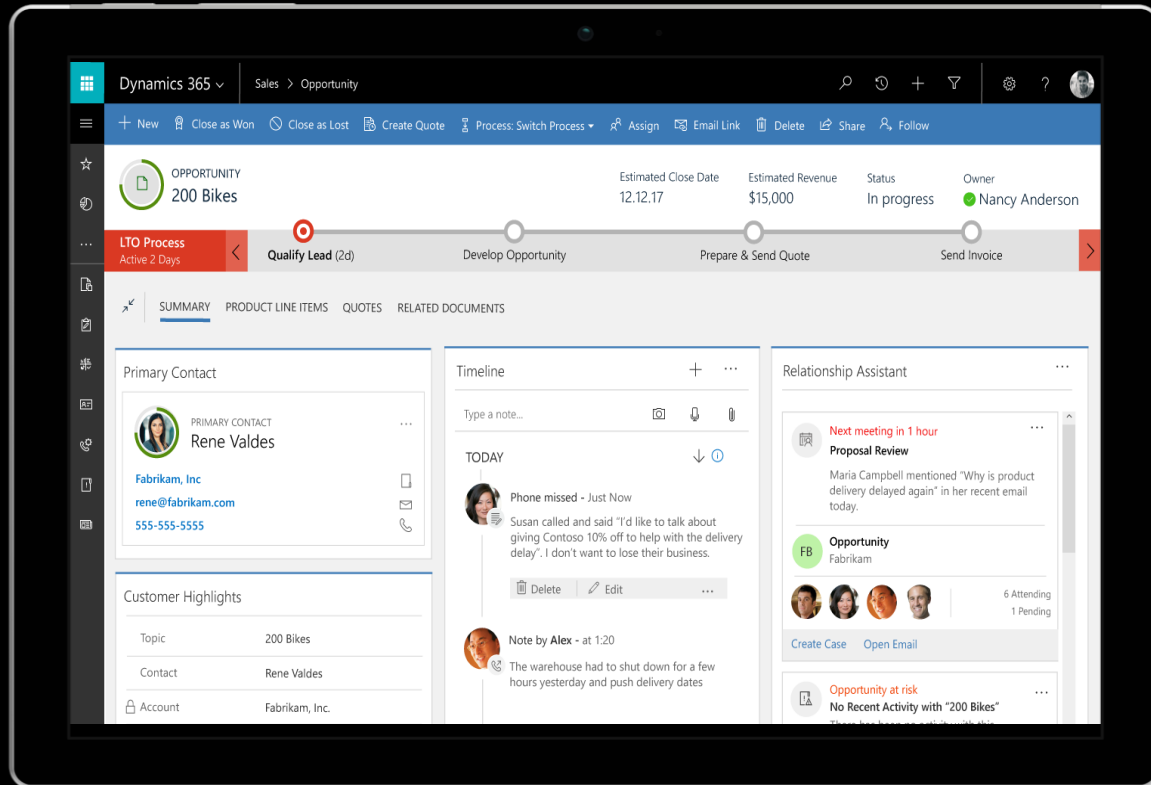

Portals

Model-driven Apps

Model-driven applications

Sophisticated apps built from data

Create apps around forms and processes

Allows fully metadata driven applications revolving around forms and business processes

Design sophisticated entity forms quickly

Drag and drop fields and controls in a visual designer. Choose your column and section layout.

Rich, responsive client experiences

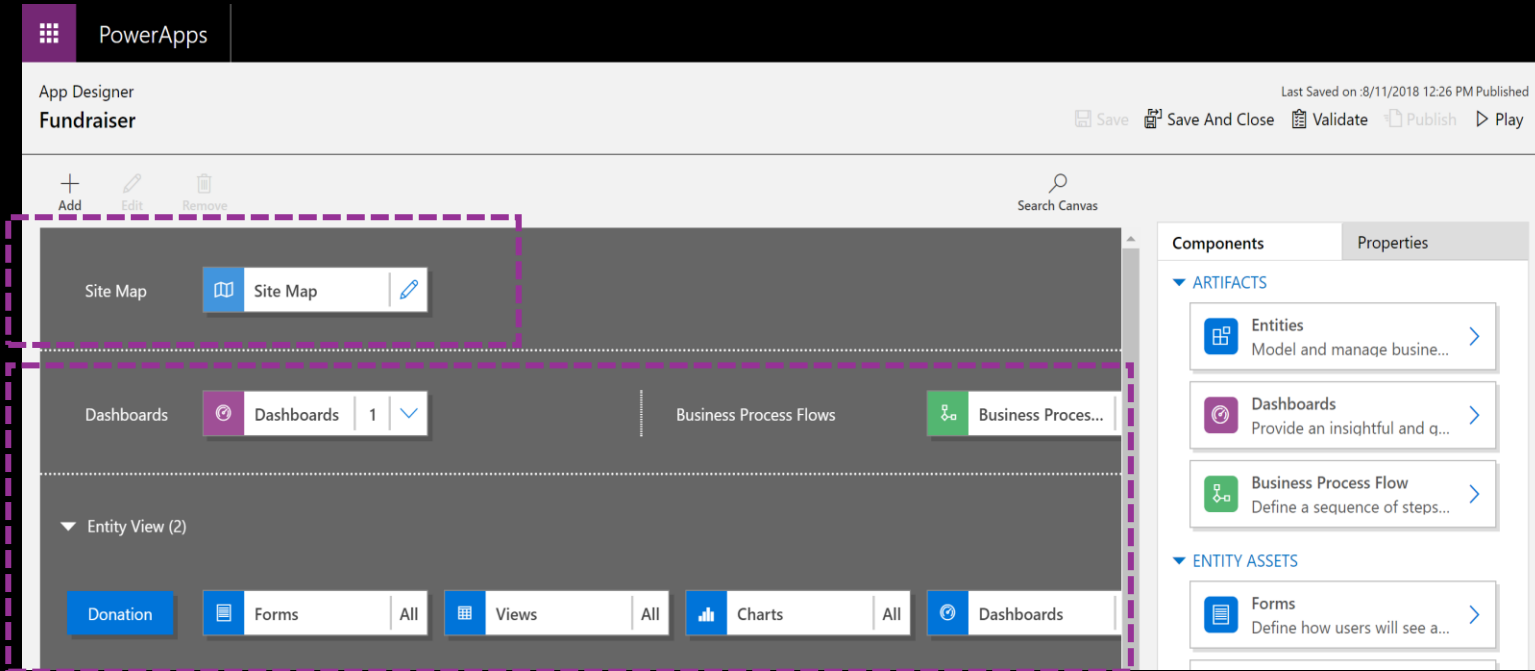

Responsive UI automatically reflows across devices based on available space.

Immersive integrations

Integrate Office 365, Power BI, Power Automate, Power Virtual Agents, LinkedIn, embedded apps.

Model-driven applications

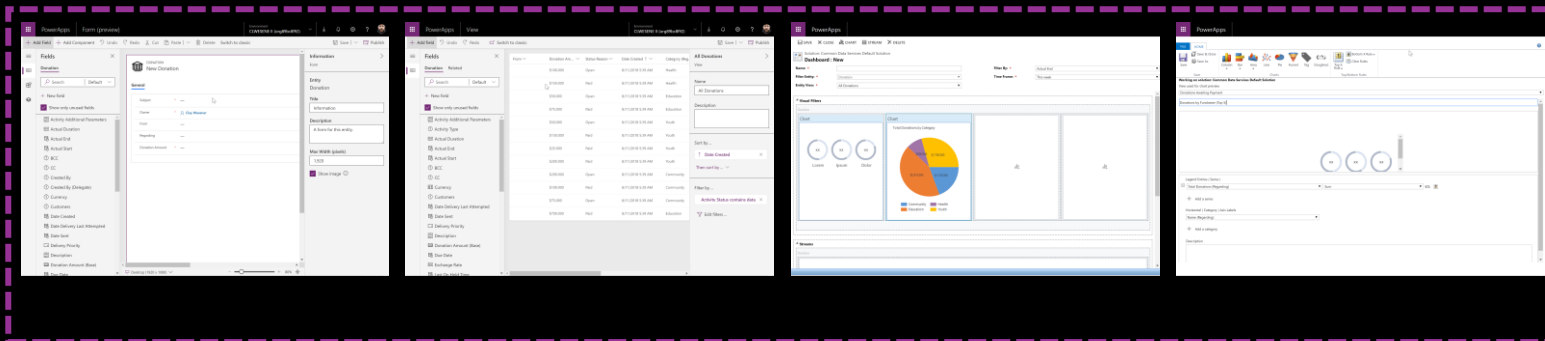

Building blocks

1 Model components are designed in their own designers as reusable objects which can be leveraged across multiple apps. This can include the UI, like forms as well as logic using Business Rules, Workflows and Business Process Flows.

2 Those model components – Forms, Views, Charts and Dashboards, Business Rules, and Process Flows – are added to an app, determining what a user will see when in the context of that specific app.

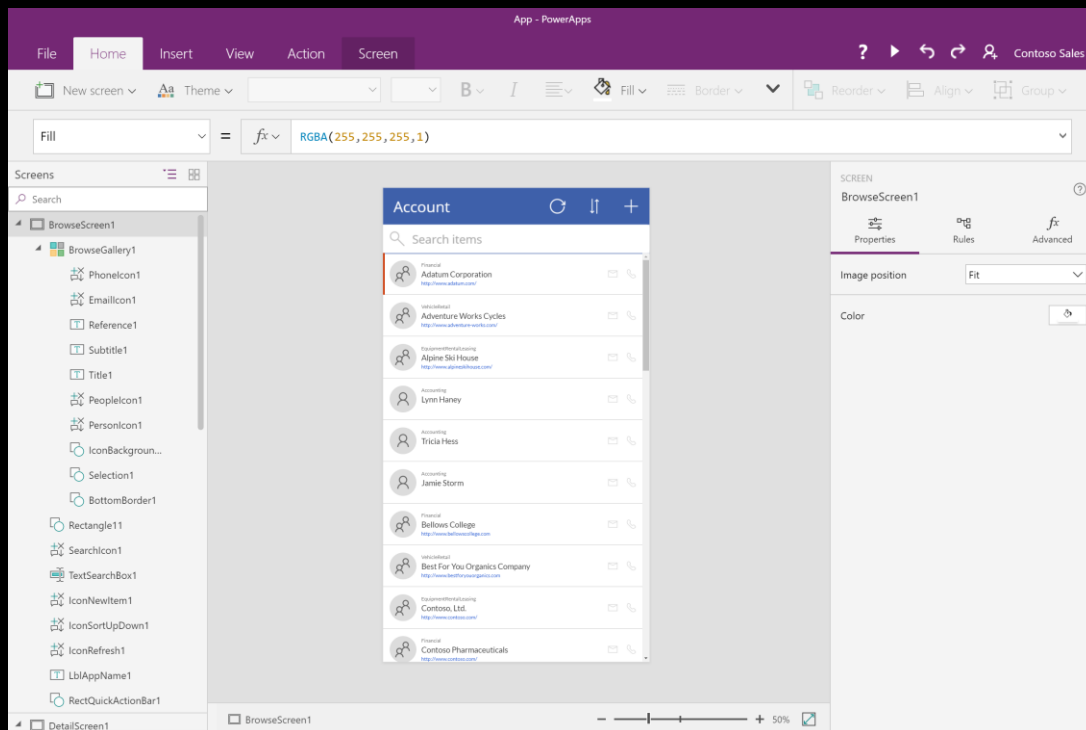

3 Navigation is configured using the Site map, this determines what's in the left-hand navigation of the app.

Canvas Apps

Canvas applications

Rich, WYSIWYG canvas-based authoring

Rich canvas-based authoring

Full creative freedom to place controls and craft user experiences with a PowerPoint-like canvas

- **Simple or advanced logical expressions**

Ability to create app logic with familiar Excel-like expressions and to mash up data from multiple sources right at the app level

“True WYSIWYG”: use the app while building it

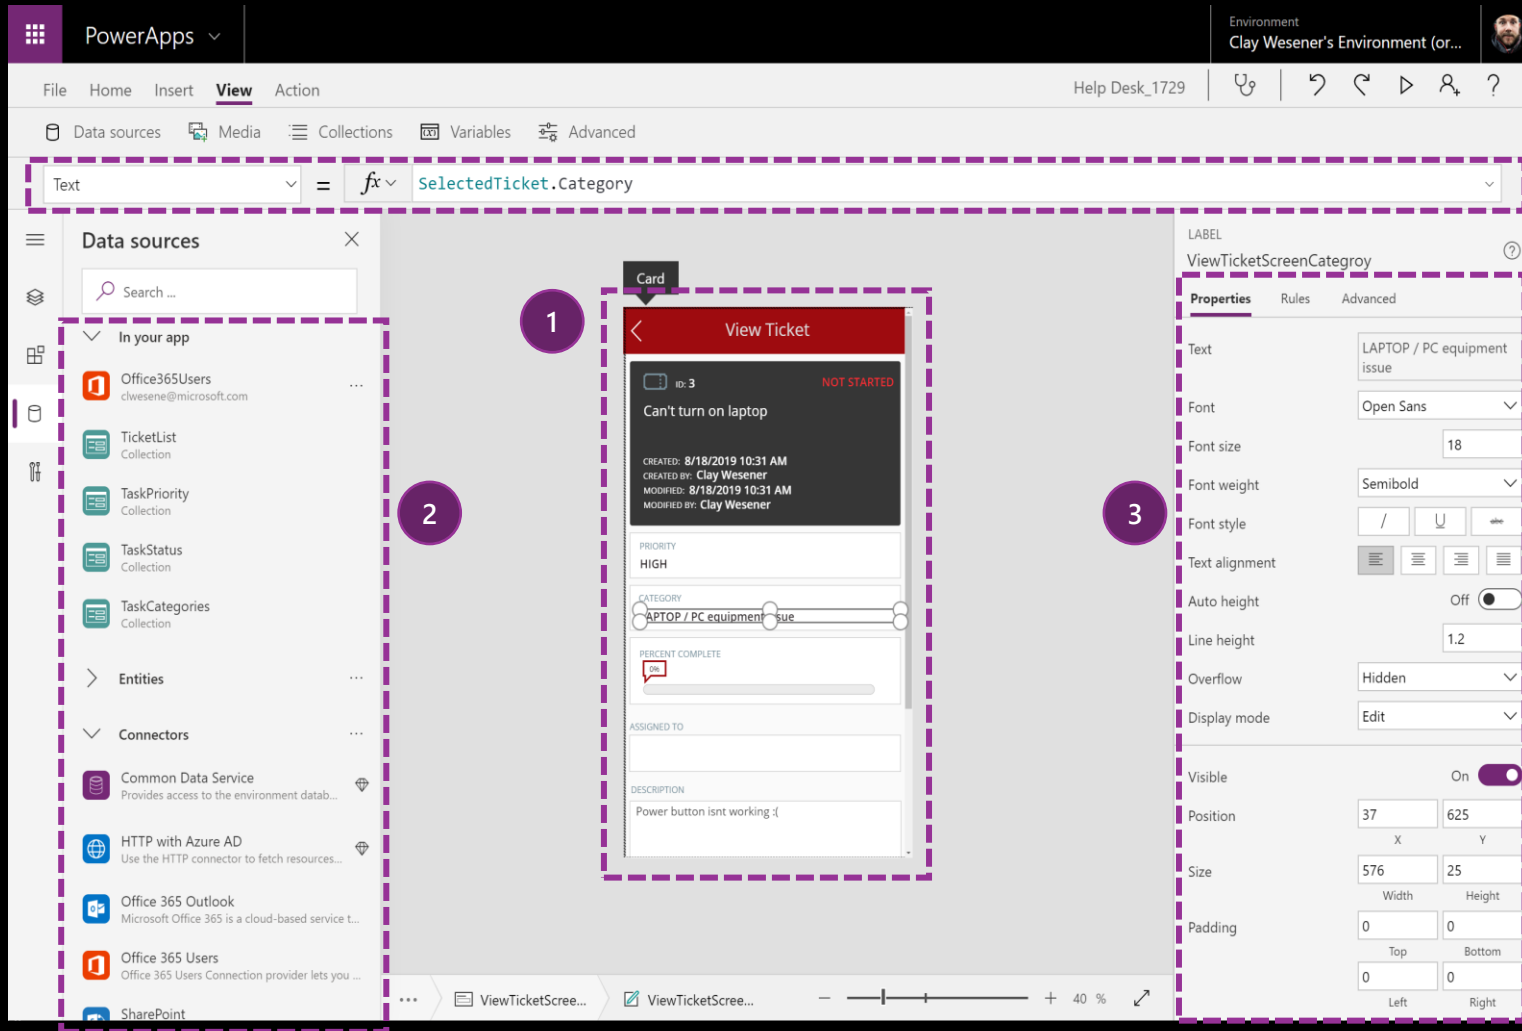

Creators work with live data and can directly use the app as they work, getting instant feedback

Template apps for phone, tablet, and web

Pre-built apps covering common business development scenarios across devices and form factors

Canvas applications

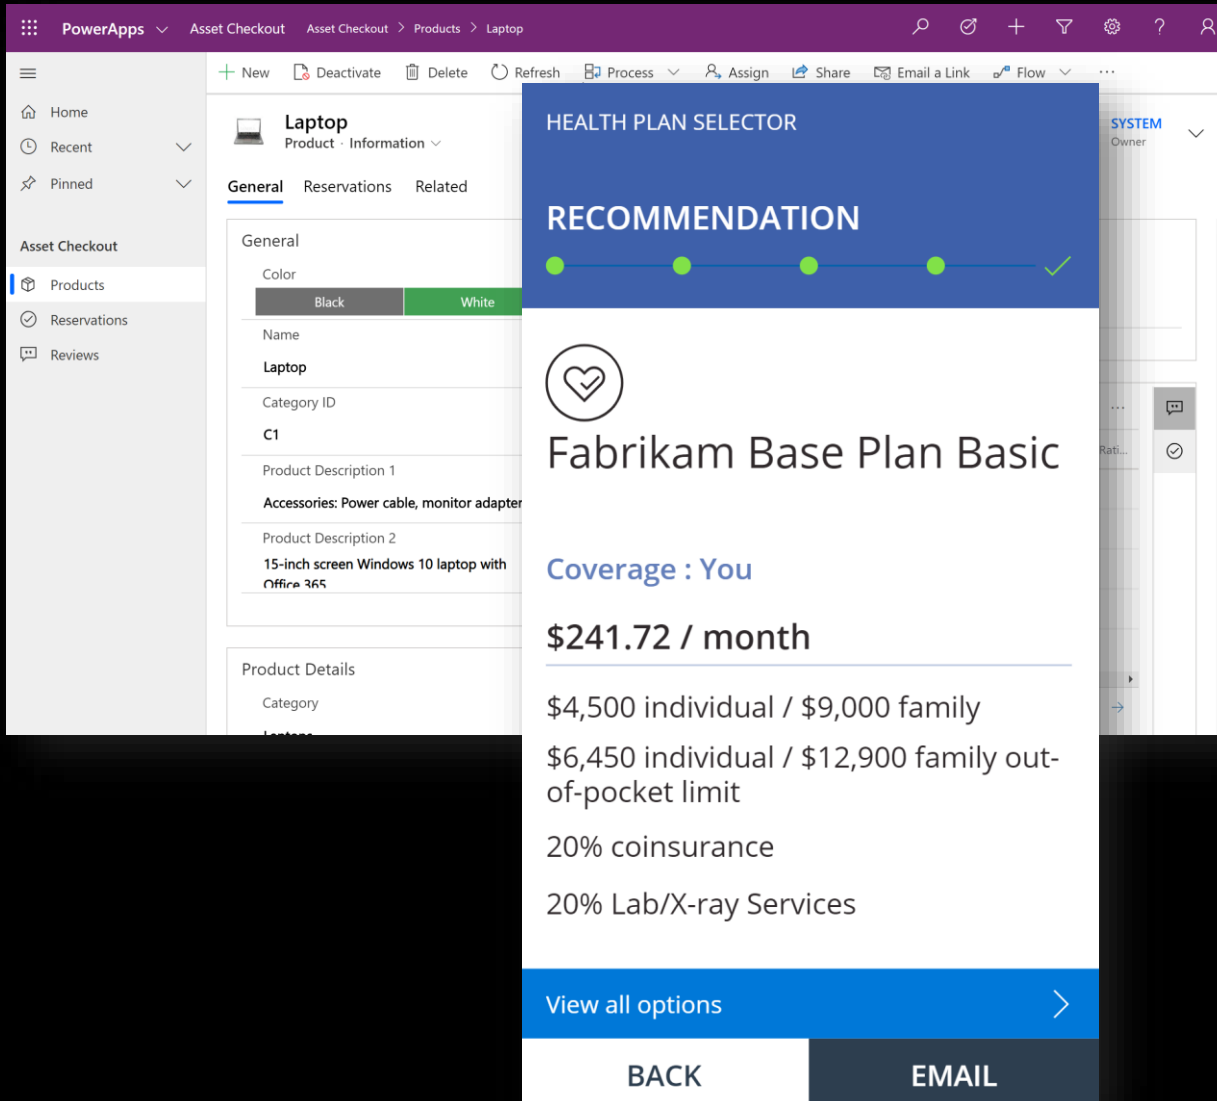

Building blocks

- 1 **Canvas screens** show the exact placement and presentation of each screen of the app allowing makers to create their UI using drag and drop.
- 2 **Data sources** allow apps to connect to over 325+ data sources through connectors and create custom connectors from APIs.
- 3 **Properties** allow simple settings like fonts, colors, boards, size to be quick customized for each control.
- 4 **Expressions** support simple to advanced functions to be created to define the interactions between data sources and controls.

Power Apps

Deciding on an App Type

Suited for Model-driven:

- **CDS** as primary data source
- **UI** aligned to **consistent** model driven and Dynamics navigation and styling
- **Limited** theming / **styling requirements**
- Maker skills aligned to **declarative designers**
- **Multiple/Unknown form factor** requirements
- Need for **centralized maintenance** of objects like Forms, Views, Business Rules, etc.

Suited for Canvas:

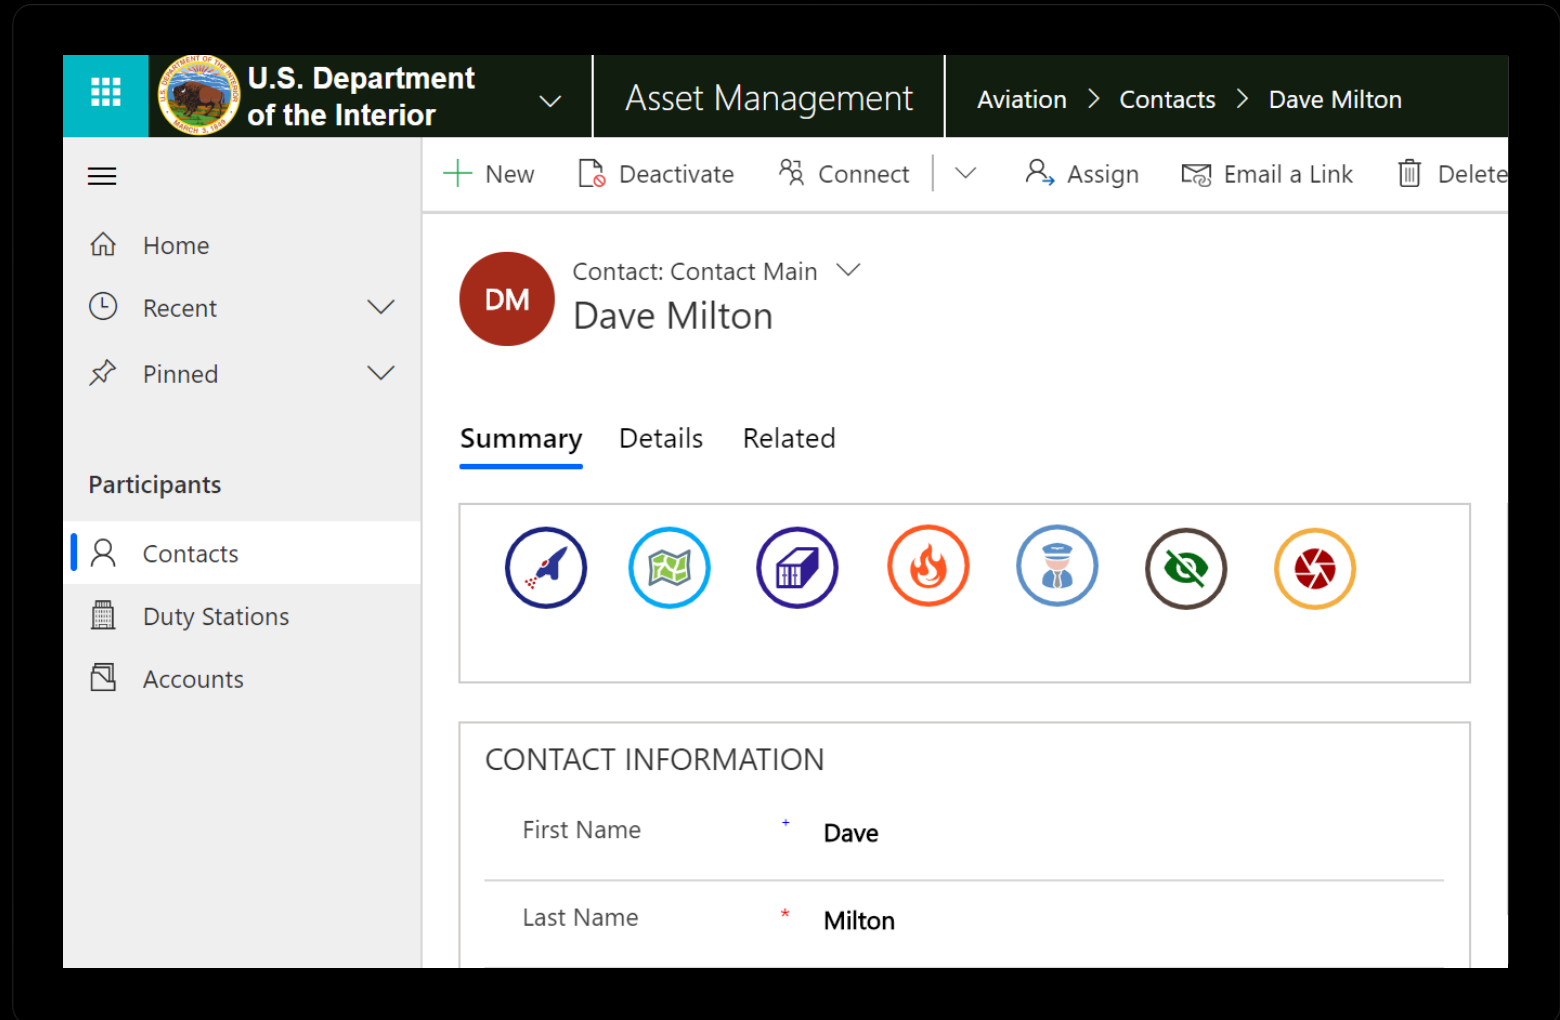

- Task based, **focused scenario**
- **Precision UI** requirements
- **Specific Navigation UI**
- **Form factor specific UI**
- Maker skills aligned to **expressions and formulas**
- **Non-CDS and CDS** data sources

Power Apps

Embed Canvas Apps

Put a Power App in your Power App!

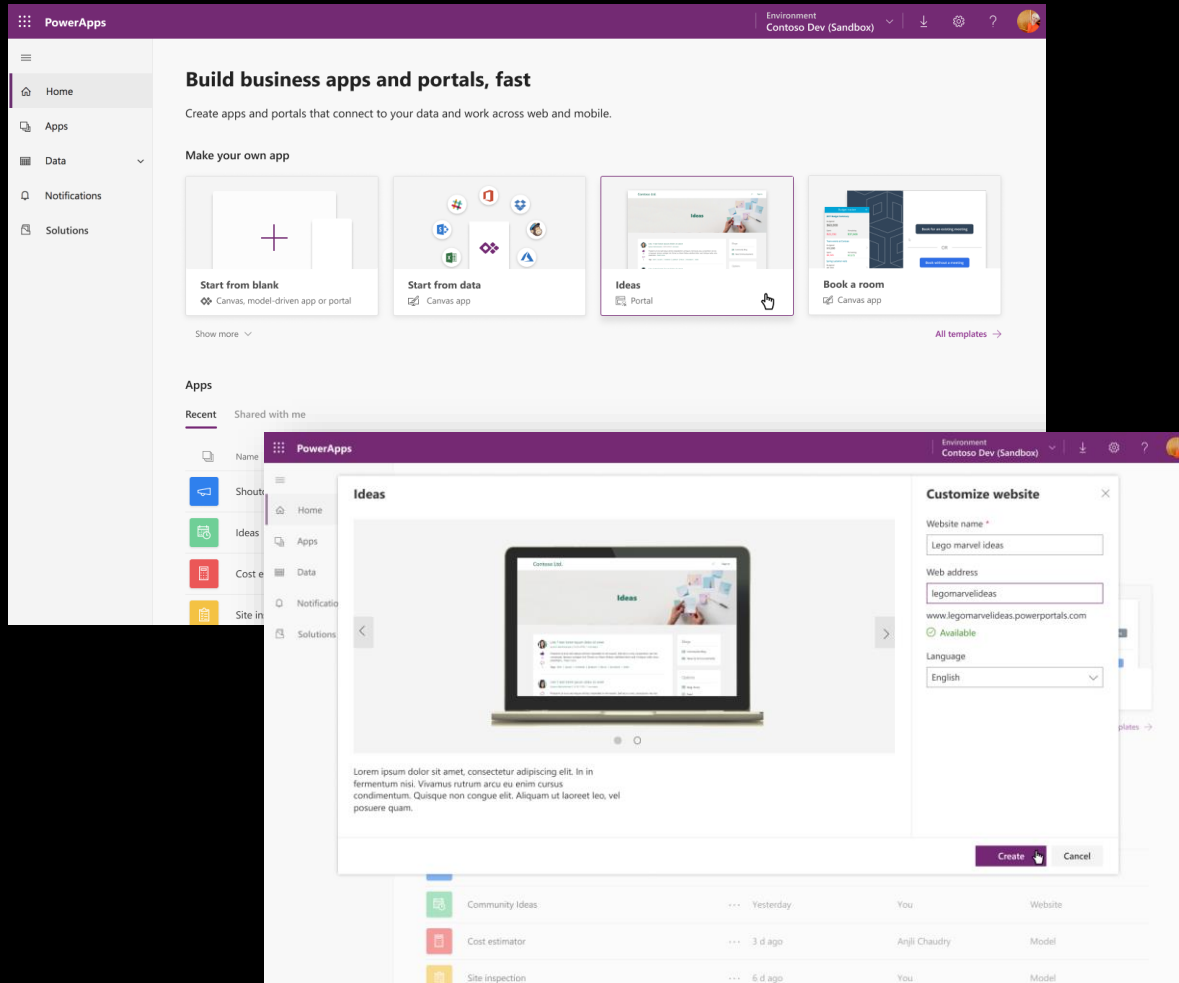

- Alternative to legacy web resources
- Embedded canvas apps can navigate, refresh, and save the host form. [See more](#)
- Use [responsive layout](#)

Power Apps Portals

Power Apps Portals

Powerful websites for external users

Predefined Templates

Use a predefined template or create your own portal

Built-in Authentication

Content can be made available anonymously, or through a variety of authentication providers (custom, Facebook, Google, AAD, etc.)

WYSIWYG

Create and manage pages in few clicks increasing your productivity multifold

Expose CDS Data

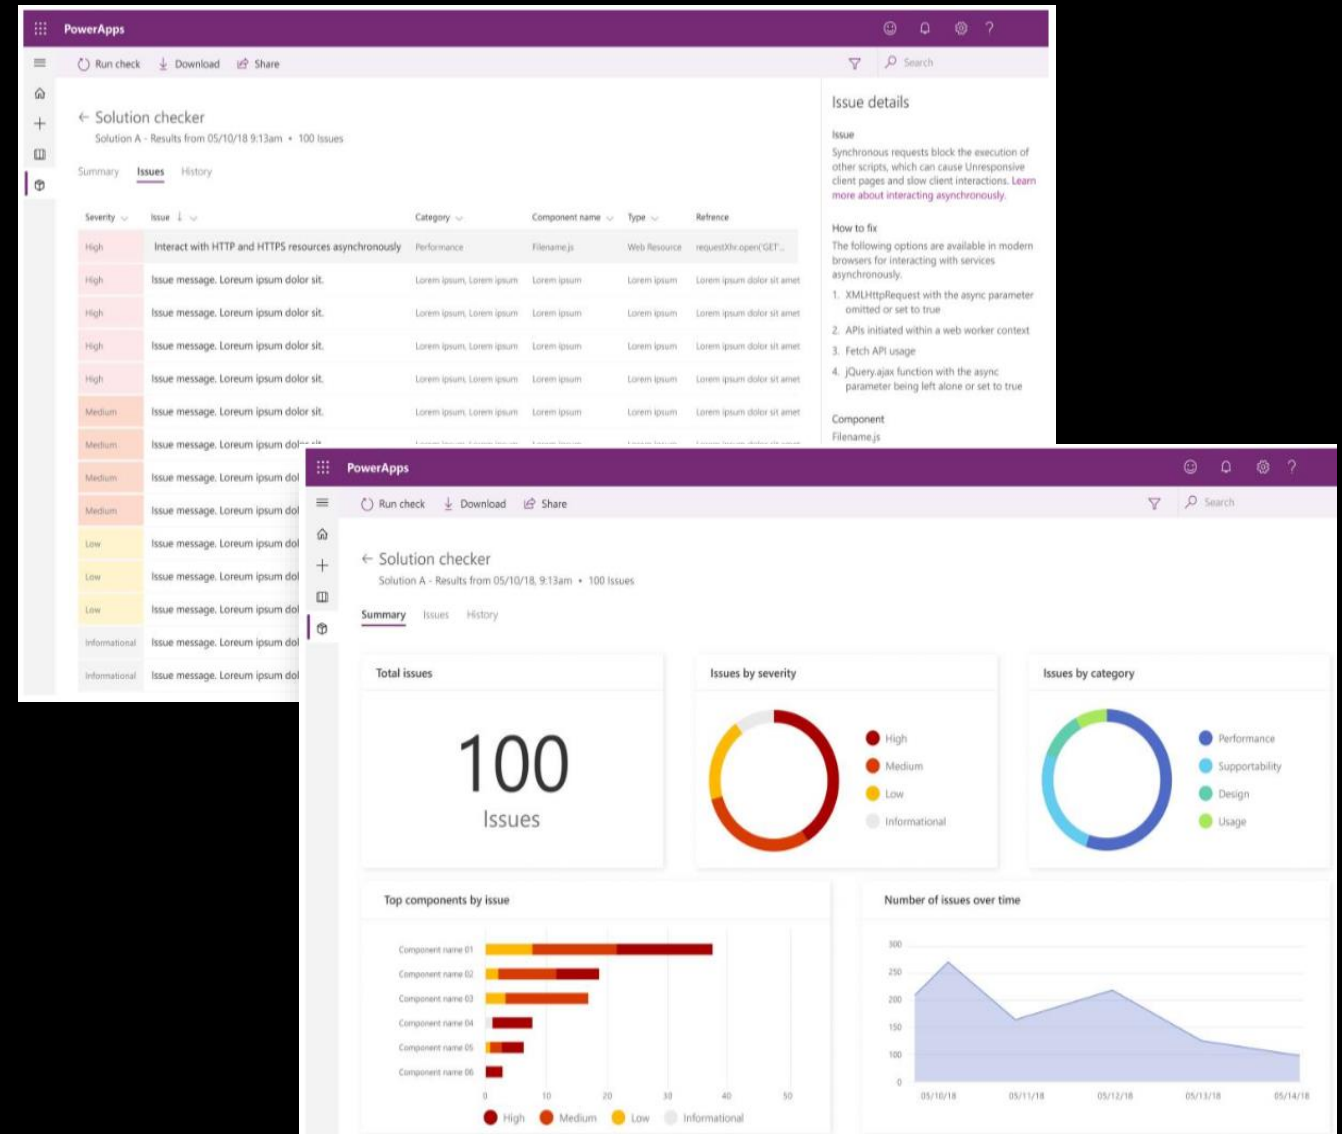

Use Model driven app constructs like forms, views, charts, dashboards etc. to surface CDS data

Solution Checker

Solution Checker

Quality, quality, quality

- **Static analysis** of Power Apps Solutions
- Specific **performance and stability risks** called out by **severity**
- Online results to **quickly review issues** and **recommended fixes**
- **Check** your solution **during Export**
- New **reliability rules** added
- Full **localization** support

Solution Checker

Report Components

What is checked?

- Web resources (JavaScript, HTML)
- Plug-ins & Message step configurations
- Custom workflow activities/actions

Best practices covering

- Performance
- Usage
- Design
- Supportability
- Maintainability
- Upgrade readiness

Solution checker report

- Issue
- Category impacted (Performance, Usage...)
- Severity
- Component (Web resource, plug-in...)
- Location (JavaScript filename, Assembly name...)
- Line # / Function (JavaScript)
- Module/Type/Member (Plug-in/Custom workflow)
- Specific code statement
- Detailed guidance linkage to doc articles

Series Spotlight: Lamna Healthcare Company

- Modern patient care organization
- Data is on the Common Data Service
- New business requirements

Power Apps Component Framework

Power Apps

Client-side Extensibility

Power Apps Component Framework

What is it?

*One unified framework across canvas and model-driven apps which **enables 1st and 3^d party developers to build responsive and reusable components** using their choice of libraries and services.*

```
Developer Command Prompt for VS 2017 (2)

c:\PcfPreview\test>cd ..

c:\PcfPreview>cd ..

c:\>mkdir demo1

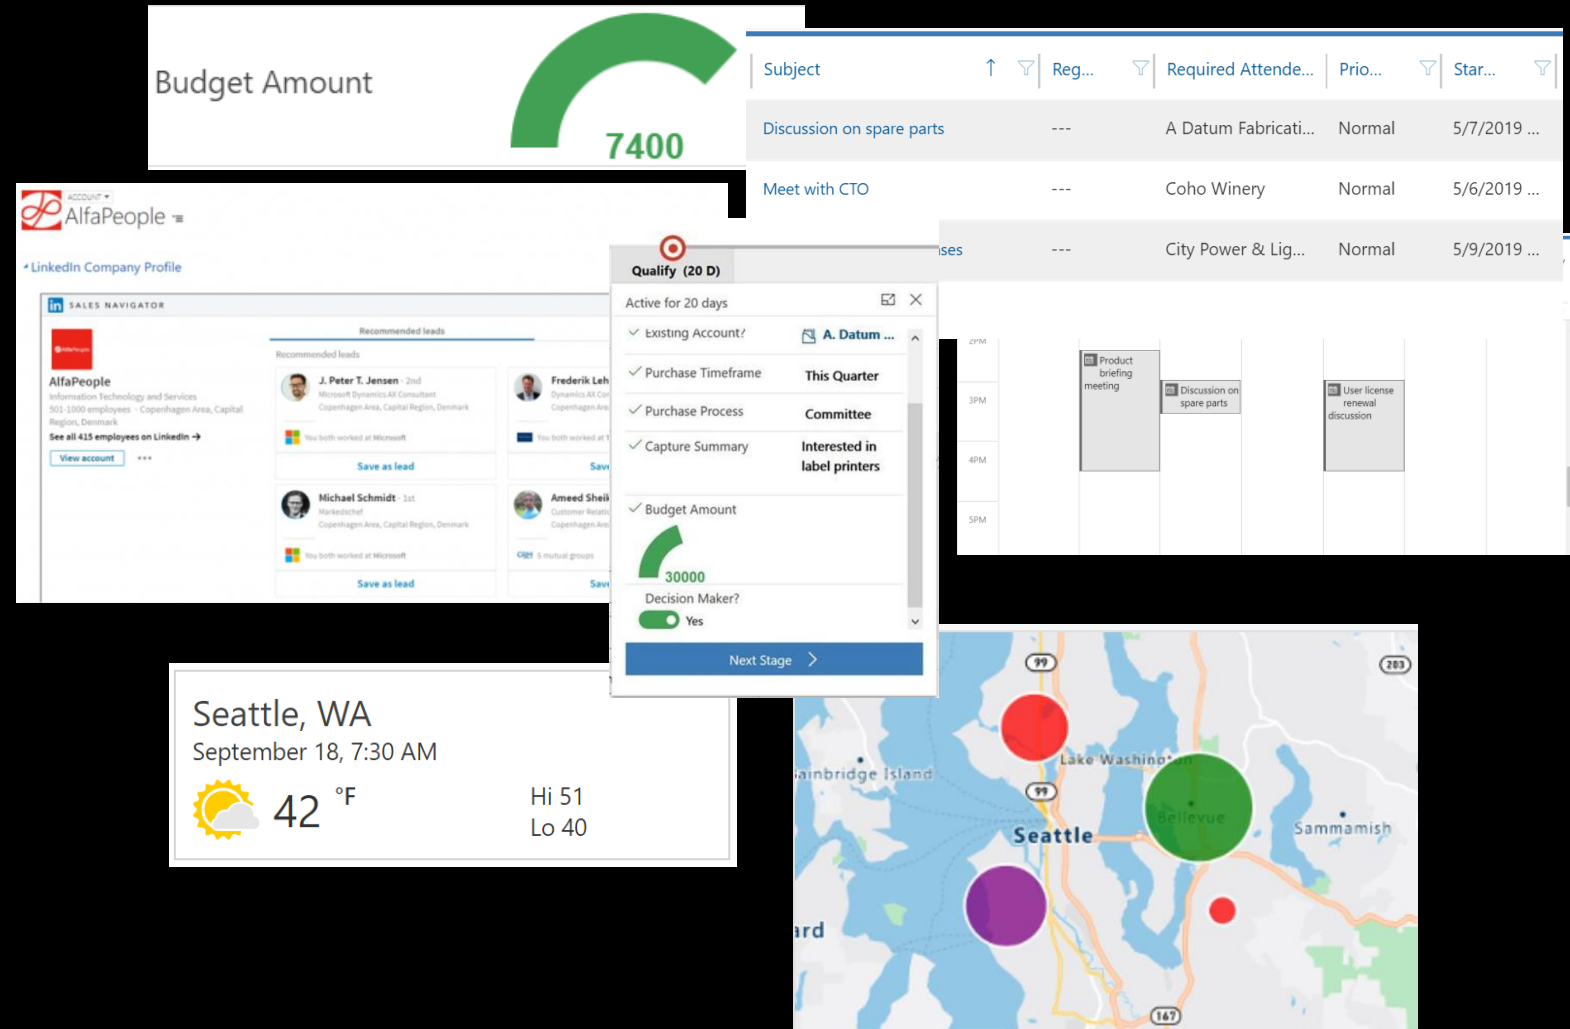

c:\>cd demo1

c:\demo1>pac pcf init
```

Power Apps Component Framework

What components can I add?

- Field control on the form
- Entity grid
- Unbound controls
- Business Process step
- Display external content
- Utilize external services

The collage demonstrates various components available in the Power Apps Component Framework:

- Gauge:** A green gauge showing a value of 7400 for 'Budget Amount'.
- Table:** A table with columns: Subject, Reg..., Required Attendee..., Prio..., and Star... It contains rows for 'Discussion on spare parts', 'Meet with CTO', and 'City Power & Lig...'. Each row has a 'Reg...' column with '---' and a 'Star...' column with a date.
- LinkedIn Profile:** A screenshot of a LinkedIn profile for 'AlfaPeople' with a 'SALES NAVIGATOR' section showing recommended leads.
- Form:** A 'Qualify (20 D)' form with fields for 'Existing Account?', 'Purchase Timeframe', 'Purchase Process', 'Capture Summary', 'Budget Amount', and 'Decision Maker?'. It includes a 'Next Stage' button.
- Calendar:** A calendar view showing events like 'Product briefing meeting', 'Discussion on spare parts', and 'User license renewal discussion'.
- Weather Widget:** A widget showing weather for 'Seattle, WA' on 'September 18, 7:30 AM' with a temperature of 42°F and a high/low of 51/40.
- Map:** A map of the Seattle area with colored circles (red, green, purple) indicating locations like 'Bellevue' and 'Sammamish'.

Samples & Documentation at <https://aka.ms/pcfdocs>

Preview announcement at <https://aka.ms/pcfblog>

Power Apps Component Framework

Developer tooling – Power Apps CLI

Simple command line interface (CLI)

Control templates support (field and dataset)

Built in validations

Catch issues prior to deployment

Automated build processes

Local debug harness

Render and test controls locally

Solution packaging support

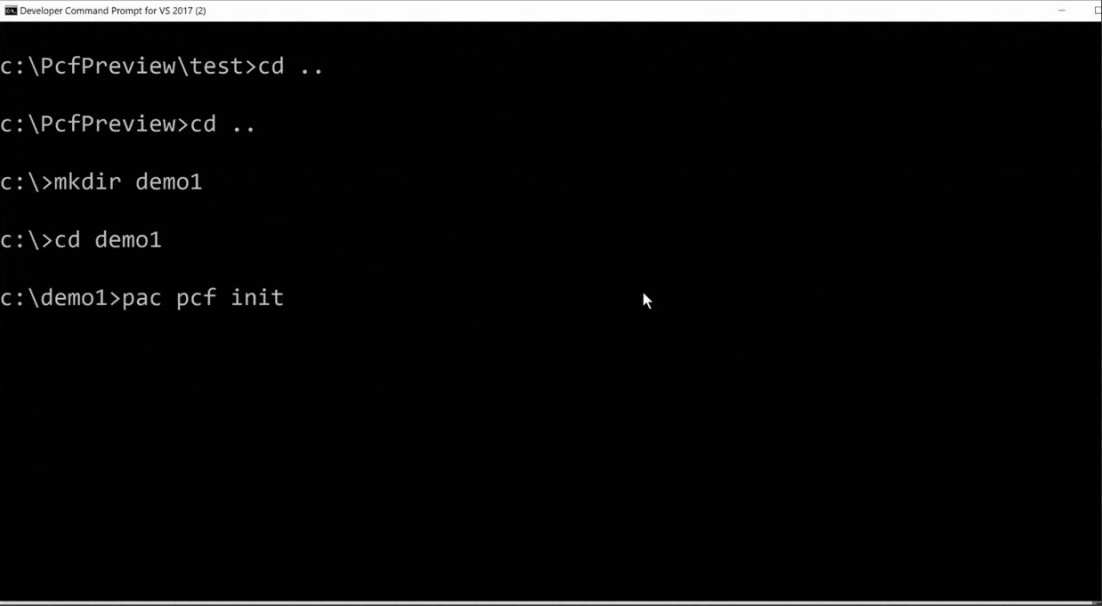

Continue to evolve support matrix

Include components such as Plugins & Web resources

IDE of your choice can be used

Once a control is created using the CLI

Visual Studio plugin support coming soon

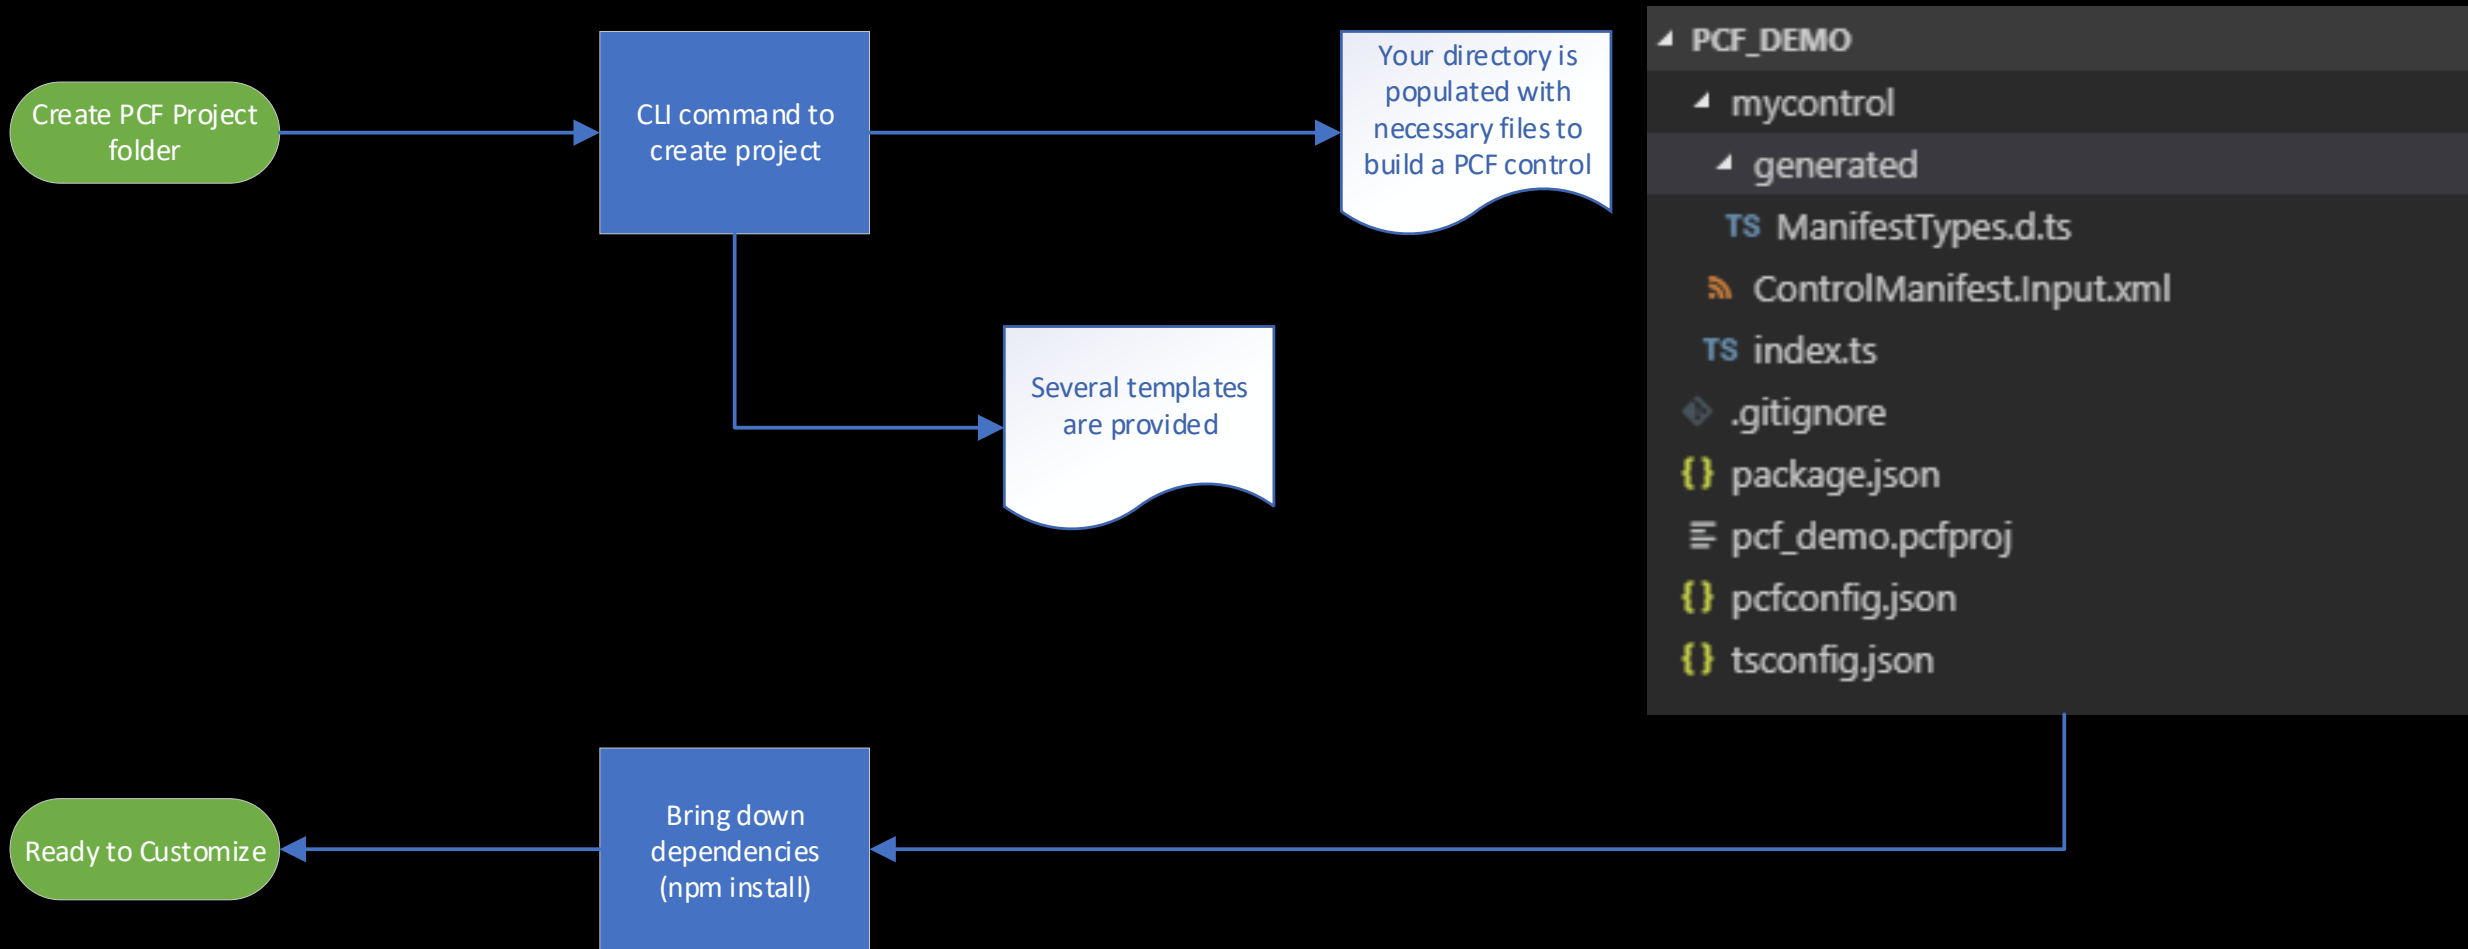

```
c:\PcfPreview\test>cd ..  
c:\PcfPreview>cd ..  
c:\>mkdir demo1  
c:\>cd demo1  
c:\demo1>pac pcf init
```

CLI enables you to build custom components for Power Apps faster and more efficiently.

Power Apps Component Framework

How to start developing

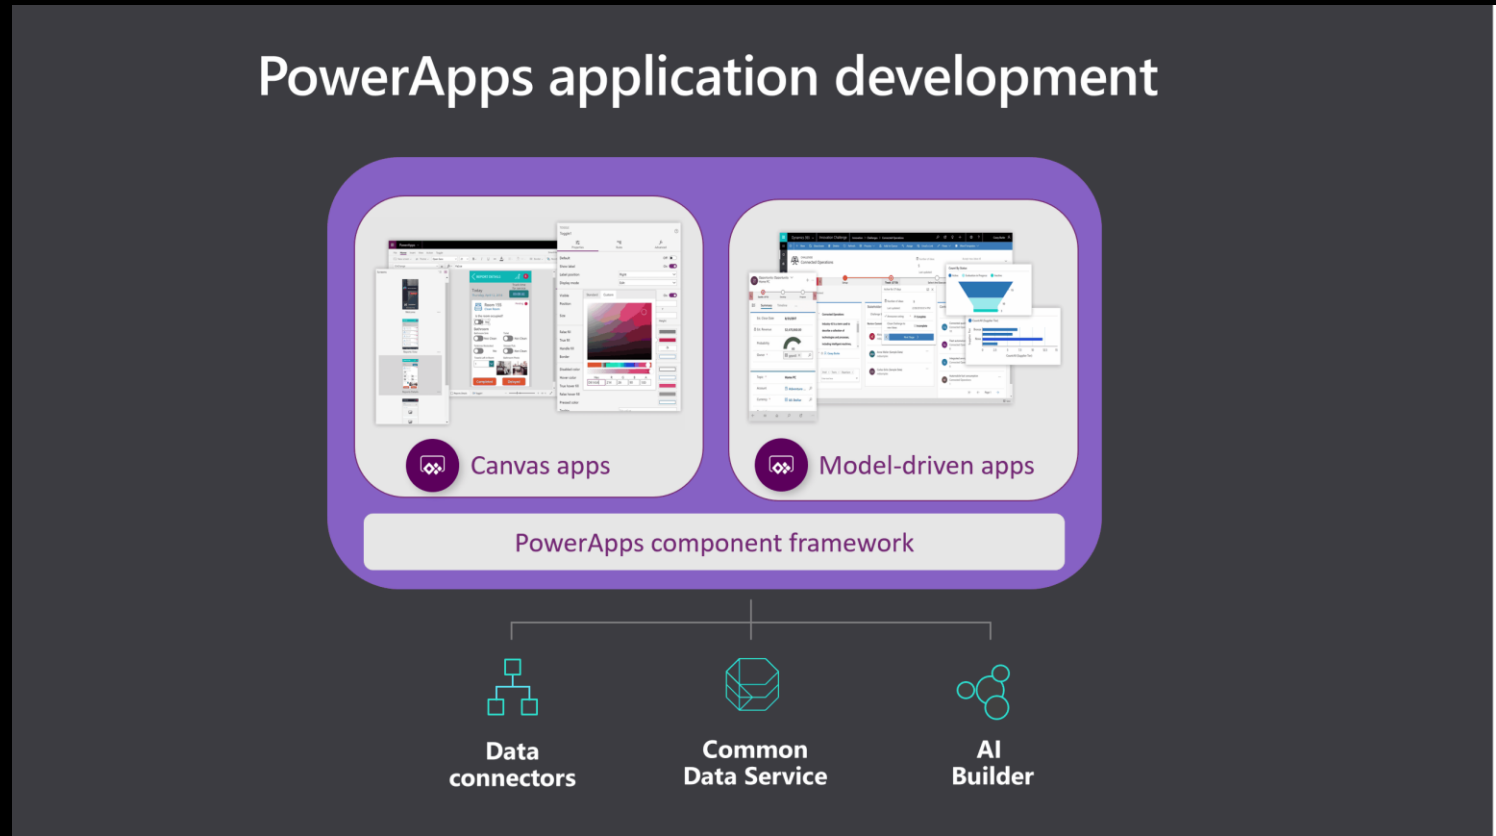

Power Apps Component Framework

Now on canvas apps!

IN PUBLIC PREVIEW NOW

- **One common framework** for both model-driven and canvas apps
- First big step towards **model and canvas app convergence**
- Same components can be **reused** across both app types due to same framework interface
- **All new 1st party components** including AI controls are already being build using PCF

Same set of custom components across model and canvas apps

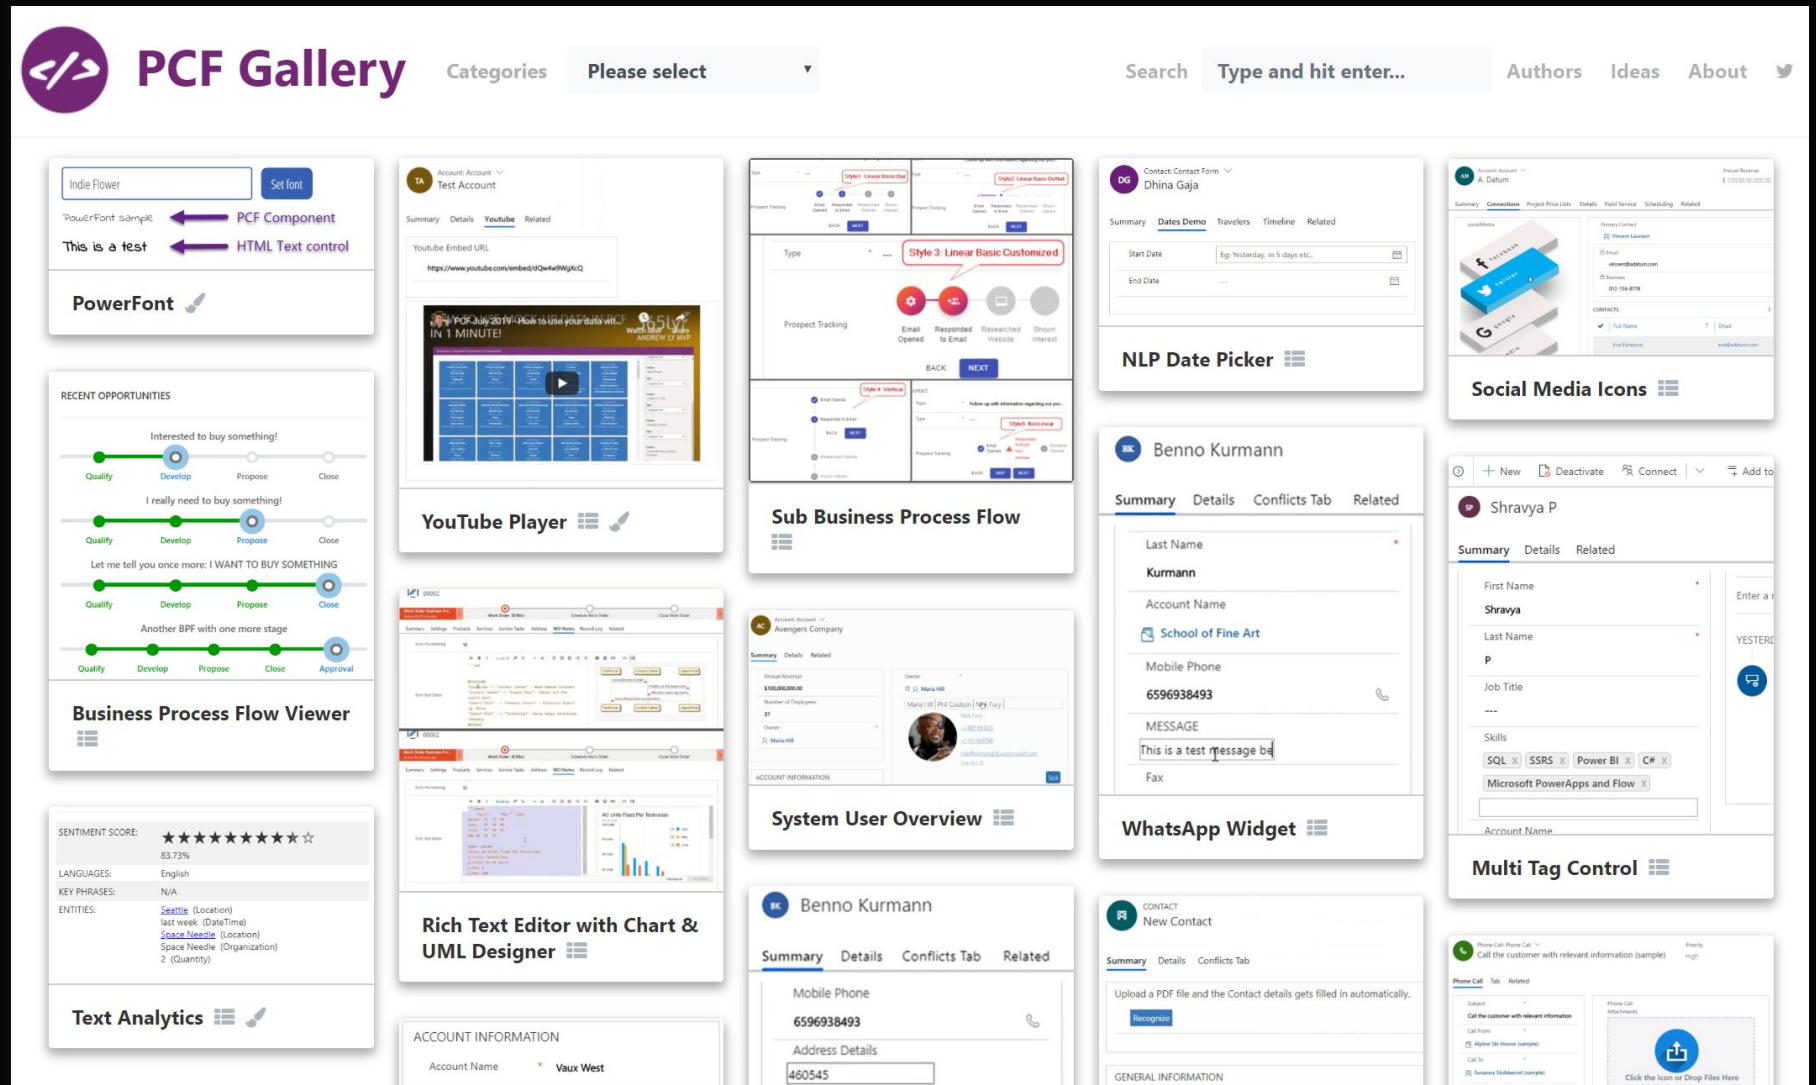

<https://aka.ms/PCFCanvasBlog>

PCF Gallery

Components created by 3rd parties

- **Example components** created by external 3rd party users
- Download from **GitHub** today!
- **Add** them to your app
- **Create and Share** your own component

<https://pcf.gallery/>

The screenshot displays the PCF Gallery website interface. At the top, there's a navigation bar with the PCF Gallery logo, a 'Categories' dropdown menu, a search bar with the placeholder 'Type and hit enter...', and links for 'Authors', 'Ideas', and 'About'. Below the navigation bar, a grid of component thumbnails is visible. Each thumbnail represents a different component, such as 'Indie Flower', 'PowerFont', 'YouTube Player', 'Sub Business Process Flow', 'Business Process Flow Viewer', 'Text Analytics', 'Rich Text Editor with Chart & UML Designer', 'System User Overview', 'WhatsApp Widget', 'Multi Tag Control', and 'Social Media Icons'. Each thumbnail includes a preview of the component's functionality and a title. The components are created by various users, including 'Indie Flower', 'Benno Kurmann', and 'Shravya P'.

DEMO #3

What did we cover today?

Understanding how Power Apps empower every developer to do more

How to use components to easily wire up a reusable navigation system

How to create a pop-up window to display on screen when a user commits an action

Overview of Power Apps Component Framework and how to embed a PCF control

Coming up next:

June 23, 2020

Automate Business Processes

- Power Automate
- Power Virtual Agents
